

SRS BASED
ABRIDGED LIFE TABLES
2019-23

OFFICE OF THE REGISTRAR GENERAL &
CENSUS COMMISSIONER, INDIA

MINISTRY OF HOME AFFAIRS
GOVERNMENT OF INDIA
NEW DELHI

PREFACE

The Sample Registration System (SRS) of the Office of Registrar General & Census Commissioner, India brings out Abridged Life Tables annually. The report presents the life tables for India and bigger States/Union Territories. As we all know, a life table summarizes the mortality experience of a population during the period of study. It states the probabilities of death and survival of a hypothetical group or cohort at different ages, which gradually diminishes due to deaths. The life tables brought out under SRS present the scenario of life expectancy at birth and at various quinquennial age groups.

2. Based on the SRS data, this office has been preparing life tables since 1970-75. Although the initial issues of life tables till the period of 1986-90 were brought out at five-year intervals, the subsequent issues have been brought out annually on a five-yearly moving average basis so as to form a continuous series. The present report contains the abridged life tables for the period 2019-23 by sex and residence for India and bigger States/UTs (with population 10 million and above viz. Andhra Pradesh, Assam, Bihar, Chhattisgarh, Delhi, Gujarat, Haryana, Jammu & Kashmir, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh, Uttarakhand and West Bengal) along with Himachal Pradesh. It is presented from age zero (at birth) up to the age group 85+.

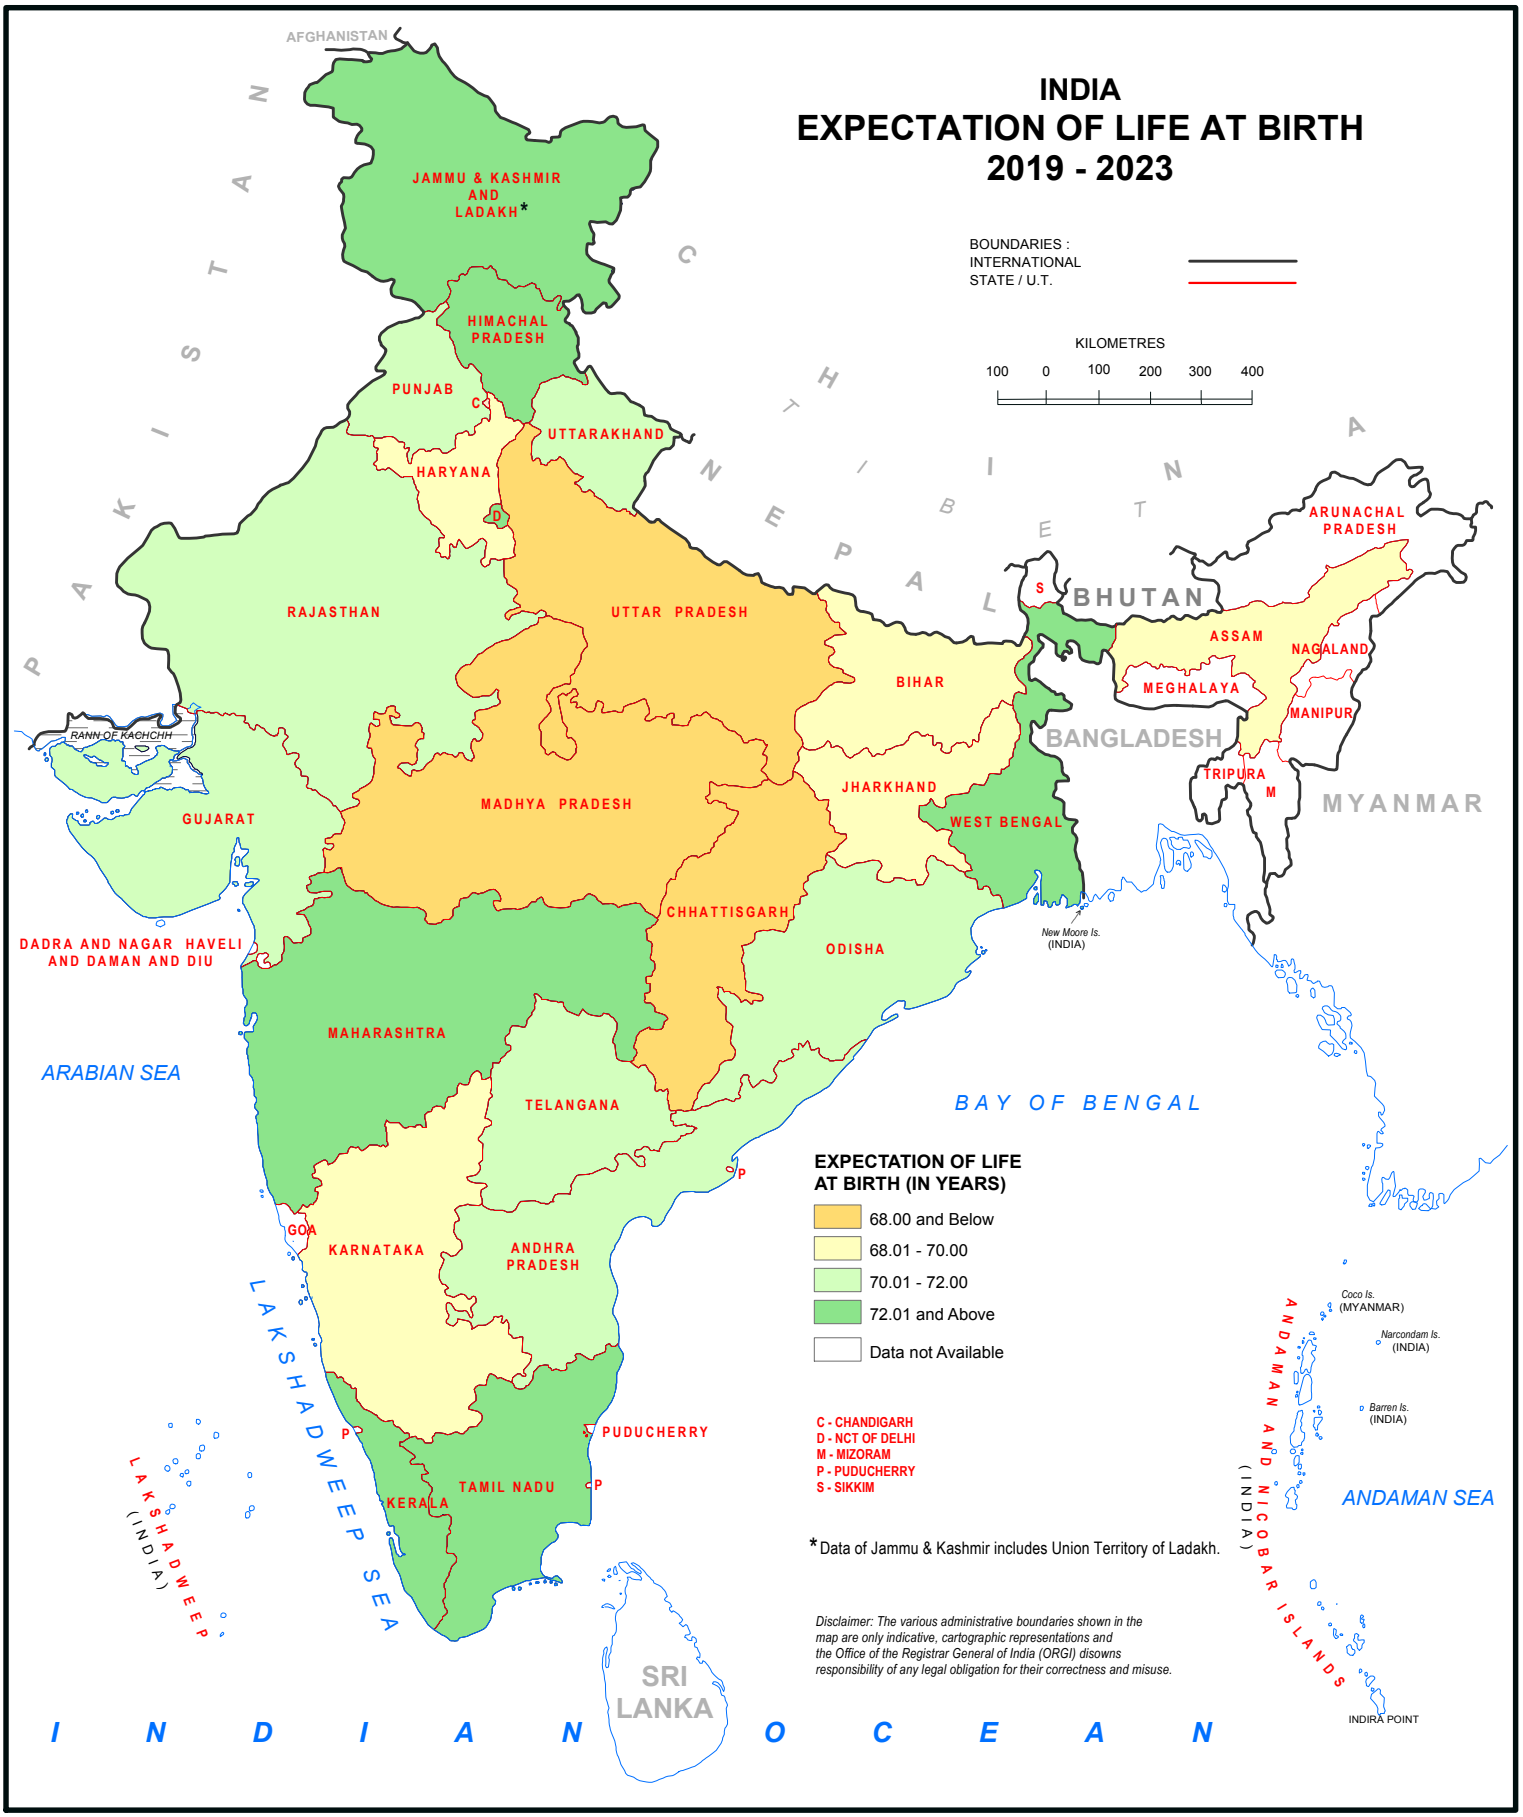

3. This report has been prepared by the officials of the SRS-VA wing of VS Division led by Sunil Kumar Patel (Joint Director) under the guidance of Shri Sanjeev Kumar, Additional Registrar General. In particular, I wish to place on record the efforts put in by Shri Pankaj Kaushik, Assistant Director in bringing out this publication. This study has been made possible with the active involvement of staff and officers of the Directorates of Census Operations, SRS Wing of the Vital Statistics Division, IT Division and Map Division at the headquarters. I am thankful to all of them for their efforts and support.

EXECUTIVE SUMMARY

The present report on ***'SRS based Abridged Life Tables 2019-23'*** contains the probabilities of death and average longevity at various broad age groups. The life tables are presented for India and bigger States/Union Territories, by sex and residence.

2. The salient features of the report are as summarized below.

- Expectation of life at birth for India has been estimated at 70.3 years for the period 2019-23, exhibiting increase of 0.4 years from 2018-22. The life expectancy at birth varies from 64.6 in Chhattisgarh to 75.1 in Kerala.
- The expectation of life at birth is 69.1 years in rural areas and 73.1 years in urban areas for 2019-23. The life expectancy has increased by 0.5 years for rural and by 0.2 years in urban areas as compared to 2018-22.
- At the national level, the life expectancy at birth for males has been estimated at 68.5 years and that for females, at 72.5 years. Expectation of life at birth is highest in Jammu & Kashmir (73.4 years) for males and in Kerala (78.4 years) for females, whereas it is lowest in Chhattisgarh (62.4 years) for males and 67.1 years for females).
- For the period 2019-23, the life expectancy at age one year, after surviving through the first year of life, has been 69.5 years and 73.6 years for males and females respectively.
- The expectation of life at age 60 is 18.4 years for 2019-23, with 17.3 years for males and 19.6 years for females.
- Almost all the States/UTs have recorded a higher life expectancy at birth for females in 2019-23 both across the rural and urban areas. On an average, female life expectancy at birth is more than male life expectancy at birth by almost four years. Even at age 70 years, this difference is favorable towards females by more than one year.
- The gap between the rural and urban life expectancy has also narrowed down significantly from 1970-75 to 2019-23. In case of life expectancy at birth, most of the states have reported higher life expectancy in urban areas than in rural areas. There is a difference of about 4.0 years in urban-rural life expectancy at birth and about 1.5 years in urban-rural life expectancy at age 70, for the country.

* * *

ABRIDGED LIFE TABLES 2019-23

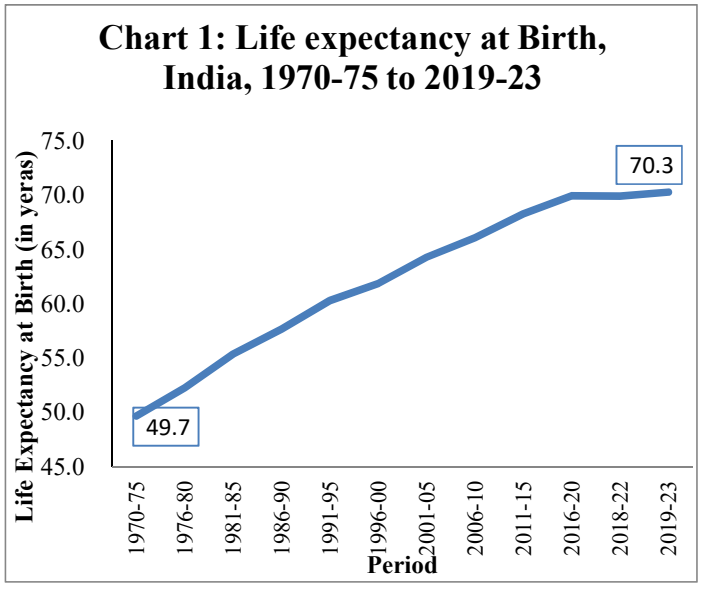

Introduction:

The life table is a mathematical table that gives the life history of a hypothetical group or cohort as it is gradually diminished by deaths. It gives the probabilities of death and survival at various age groups. A life table summarizes the mortality experience of a population during the period of study and provides concise measures of the longevity of that population. In the words of William Farr, life table is the 'Biometer' of the population. The data for the construction of life tables considers both deaths and the population exposed to risk of death classified by age.

2. In India, life expectancy at various broad age groups has been estimated through Sample Registration System (SRS) since 1970-75. The Sample Registration System (SRS) is a large-scale demographic sample survey based on the mechanism of dual recording system with the objective of providing reliable estimates of fertility and mortality indicators at State and National levels for rural and urban areas separately. The estimated age-specific death rates derived from the SRS provide the necessary database for undertaking construction of abridged life tables. To adjust for the sampling fluctuation and for augmenting the sample size, five-year average is compiled for estimating age-specific death rates separately for rural and urban areas, both for male and female.

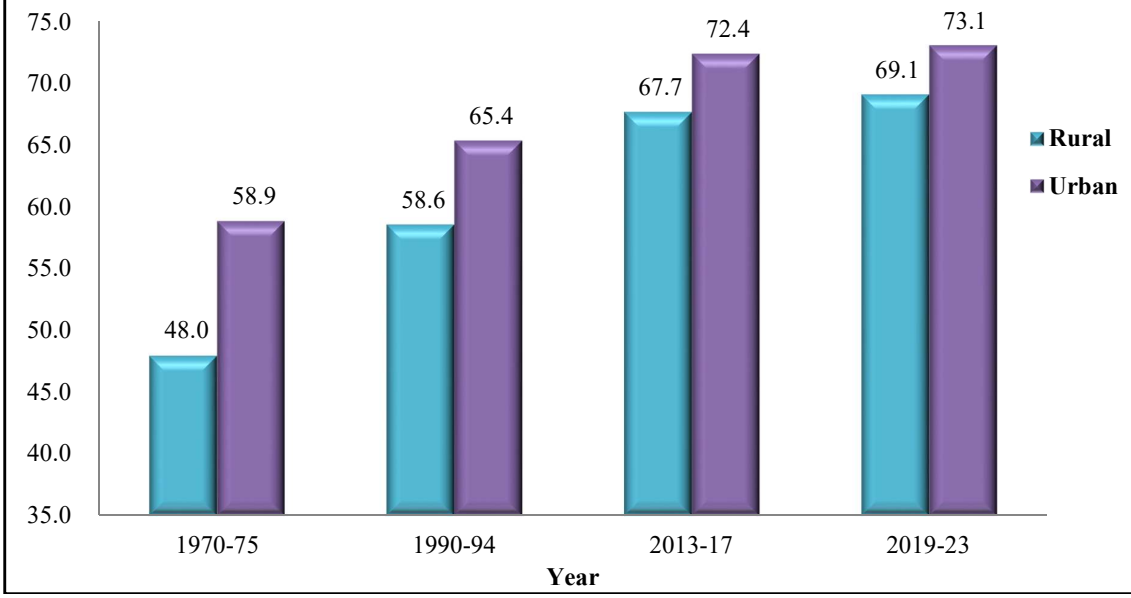

3. The present report covers the life tables for the period 2019-23. The life table has been constructed for all-India and bigger States/Union Territories (having population 10 million and more) along with Himachal Pradesh. The life table estimates of 'Jammu & Kashmir' represent the erstwhile state of Jammu & Kashmir, as the reference period includes the year; and therefore, includes the present-day Union Territories of Jammu & Kashmir and Ladakh. For the case where, for a given age-group and sex, no deaths were reported in the sample of 2019-23, the mortality rate has been imputed on the basis of a geographic approach, to generate the life tables. Hence, for females in the age-group of 10-14 and 15-19 years in the rural region of Delhi, the mortality rate for females in the total region of Delhi has been used as the imputed mortality rate. Similarly, for males in the age-group of 1-4 years in the urban region of Himachal Pradesh, the mortality rate for males in the total region of Himachal Pradesh has been used as the imputed mortality rate.

4. The life expectancy at birth for the country has undergone a significant change from 49.7 in 1970-75 to 70.3 in 2019-23, registering an increase of 20.6 years in the last four decades, as depicted in Chart-1. It is worth to mention that in 1970-75, the life expectancy at birth for males (50.5) was more than that of females (49.0). But the trend has been reversed since 1981-85. In 2019-23, the female life expectancy (72.5) is higher than that of males (68.5) by four years.

5. The gap between rural and urban life expectancy has also narrowed down significantly during the same period (Chart 2). The life expectancy at birth was 48.0 years and 58.9 years in 1970-75 period for rural and urban regions of the country respectively, which has increased to 69.1 years and 73.1 years during 2019-23 period in rural and urban regions respectively.

Chart 2: Rural vs Urban Expectation of Life at Birth, India

6. There are notable variations at the State level with Kerala in 1970-75 recording the highest life expectancy at birth of 62.0 years and Uttar Pradesh, the lowest, 43.0 years. In 2019-23, the highest life expectancy at birth has been estimated for Kerala at 75.1 years, while Chhattisgarh with 64.6 years, has the lowest life expectancy at birth. The Report gives a scenario of life expectancy at various quinquennial age groups also.

7. There are several methods for construction of life tables. In this report, the life tables have been generated using mortality package for life table estimation (MORTPAK 4), which is a United Nation's software package for mortality measurements. The various columns given in the abridged life table are ${}_nq_x$, l_x, ${}_nL_x$ and e_x.

${}_nq_x$	It represents the probability of dying between exact age x and x+n
l_x	It is the expected number of persons surviving at exact age x out of the original cohort l_0 of say 1,00,000 persons
${}_nL_x$	This denotes the expected number of person-years lived between ages x and x+n years
e_x	It denotes the expectation of life at age x viz. the average number of additional years a person would live if the current mortality trends were to continue.

Life Expectancy at Birth for India, 1970-75 to 2019-23:

8. The life expectancy at birth usually denoted by e_0^0, measures the average number of years a person is expected to live under prevailing mortality conditions. Statement 1 shows the values of the expectancy of life at birth for India by sex and residence for the periods 1970-75 to 2019-23. The life expectancy at birth in 2019-23 has been 68.5 and 72.5 years for males and females respectively. There is an increase of 0.3 years in life expectancy for males and life expectancy at birth for females has been increased by 0.6 years in 2019-23 from 2018-22. The life expectancy has increased by 0.5 years for rural and by 0.2 years in urban areas in 2019-23 as compared to 2018-22.

* : India includes all States/UTs # : It does not include data from Jammu & Kashmir

Note: The Statement-1, separately for the bigger States/UTs, is given at Appendix of the report.

9. Chart 3 given below presents the expectancy of life at birth between 1970-75 to 2019-23 period separately for males and females, by residence.

Chart 3: Expectation of life at birth by Sex and Residence, India, 1970-75 to 2019-23

Expectation of life at age 1 for India, 1970-75 to 2019-23:

10. The values of expectancy of life at age 1 (e_1^0) by sex and residence at the national level are given in Statement 2. For the period 2019-23, the life expectancy after surviving through the first year of life has been 69.5 and 73.6 years for males and females respectively. A comparison of figures in Statement 2 with that in Statement 1 shows that the average expected life span improves after surviving through the first year of life for both males and females. This holds good for both the rural and urban areas. The expectancy of life at age one in rural areas for females has surpassed that of males from 1987-91. Since 1987-91, the gap between the life expectancy of males and females in rural areas has been growing in favor of females from 0.1 years in 1988-92 to 4.4 years in 2019-23. In urban areas, the gap in the life expectancy of male and female has increased from 0.4 years in 1970-75 to 3.6 years in 2019-23.

Statement 2

Expectation of life at age 1 by Sex and Residence, India*, 1970-75 to 2019-23

Expectation of Life at Birth, State-wise:

11. Statement 3 below gives the estimates of life expectancy at birth by sex and residence in bigger States/UTs in the period 2019-23. The life expectancy at birth, at the national level, has been estimated at 70.3 years for 2019-23; and it varies from 64.6 years in Chhattisgarh to 75.1 years in Kerala.

12. Almost all the States/UTs have recorded a higher life expectancy at birth for females as compared to males in 2019-23 both across the rural and urban areas. Kerala has recorded the highest life expectancy at birth for males and females in rural areas; whereas Jammu & Kashmir has recorded the highest for males and females in urban areas. The lowest life expectancy at birth has been recorded in the State of Chhattisgarh for rural males and rural females. Similarly, in the urban region, the lowest life expectancy at birth has been recorded in Chhattisgarh for both males and females during 2019-23.

Chart 4: Expectation of Life at Birth, India and States, 2019-23

13. Statement 4 shows the per annum average increase in the life expectancy at birth by sex in the period from 1970-75 to 2019-23 for India and bigger States/UTs. It is observed that from 1981-85, females have recorded higher increase in their life expectancy as compared to that of males. Per annum average increase in life expectancy for females is higher in comparison to that for males in all the bigger States/UTs and India. The maximum per annum average increase in life expectancy for males during the period 1970-75 to 2019-23 has been observed in Odisha and the minimum in Haryana. For females, the maximum annual increase has been recorded in Uttar Pradesh and the minimum in Kerala.

*: India includes all States/UTs

Life Expectancy at selected ages:

14. The estimates of the expectancy of life at selected ages during 2019-23 for India and bigger States/UTs are given in Statement 5. The estimate at birth varies from 64.6 years in Chhattisgarh to 75.1 years in Kerala during 2019-23. In all States/UTs, age-specific death rate for the children of age less than one year is more than all other quinquennial age groups except higher ages. Therefore, expectancy of life at age one is higher than that at birth in all States/UTs, except for Kerala and Delhi where it is lower by 0.5 year and 0.1 year respectively. After this, life expectancy declines at all subsequent ages in all the States/UTs. Kerala has recorded the highest expectation of life at birth. Himachal Pradesh has recorded highest expectation of life at age 5 to 50 years and 70 & 85+ age, while Jammu & Kashmir and Himachal Pradesh has the highest life expectancy at age 1 and for age 60 Jammu & Kashmir has the highest life expectancy. The minimum expectancy of life is in Chhattisgarh for all ages.

* India includes all States/UTs

15. Statement 6 below gives estimates on expectancy of life at selected ages for males for India and bigger States/UTs, 2019-23. The expectancy of life at birth for males varied from 73.4 years in Jammu & Kashmir to 62.4 years in Chhattisgarh during 2019-23. Life expectancy at other ages is found to be highest in Jammu & Kashmir (except at age 85+) and lowest in Chhattisgarh. The expectancy of life at age one is higher than that at birth in all States/UTs, except for Kerala and Delhi where it is lower by 0.3 year and 0.2 year. Life expectancy declines at all subsequent ages in all the States/UTs. At age 70, the expectancy of life for males varies from 14.2 years in Jammu & Kashmir to 7.8 years in Chhattisgarh during the period under reference.

16. The expectancy of life at selected ages for females in Statement 7 indicates that the highest expectancy of life at birth of 78.4 years for females in 2019-23 has been reported in Kerala and the lowest of 67.1 years in Chhattisgarh. The expectancy of life at age one is higher or equal at birth in all States/UTs, except for Kerala where it is lower by 0.7 year for females. Life expectancy at age 1 onwards is highest in Himachal Pradesh for females. Life expectancy of females is lowest in Chhattisgarh till age 70. For age 85+, the lowest life expectancy is in State of Bihar at 3.8 years each for Females.

*: India includes all States/UTs

17. The expectancy of life at different ages by sex at the national level during 2019-23 is presented in Chart 5 below. The graph clearly indicates that the expectancy of life for females is higher than males at all the ages in the period 2019-23.

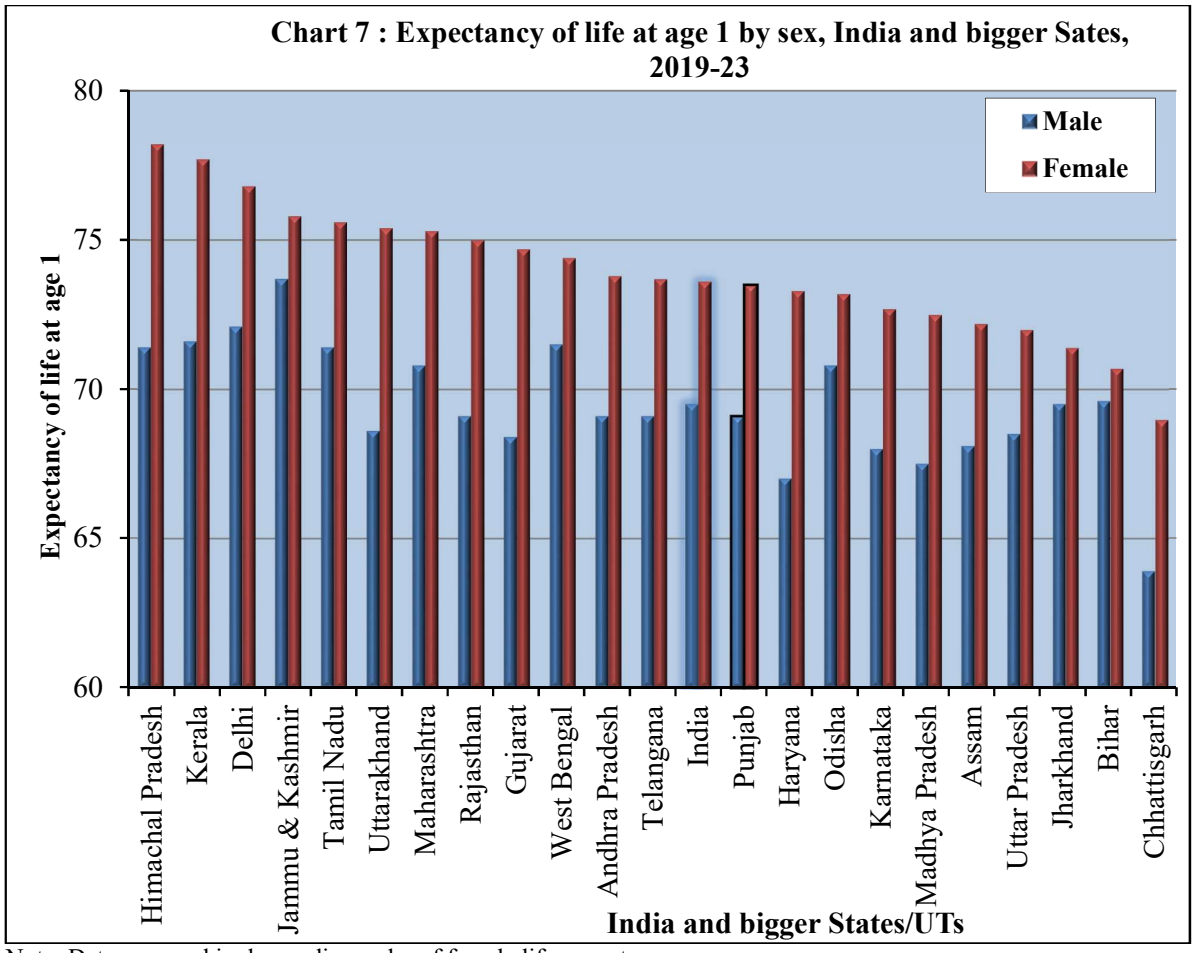

18. The expectancy of life at birth, infancy, childhood and age 60 years during 2019-23 has been graphically presented in Charts 6 to 9 by sex for India and bigger States/UTs. These charts have been depicted in descending order of female life expectancy. Chart 6 presents State level expectancy of life at birth for males and females during 2019-23. The female life expectancy at birth is higher than males in all the bigger States/UTs. The female life expectancy at birth is highest in the State of Kerala followed by Himachal Pradesh and Delhi, whereas it is the lowest for Chhattisgarh followed by Bihar and Uttar Pradesh in that order.

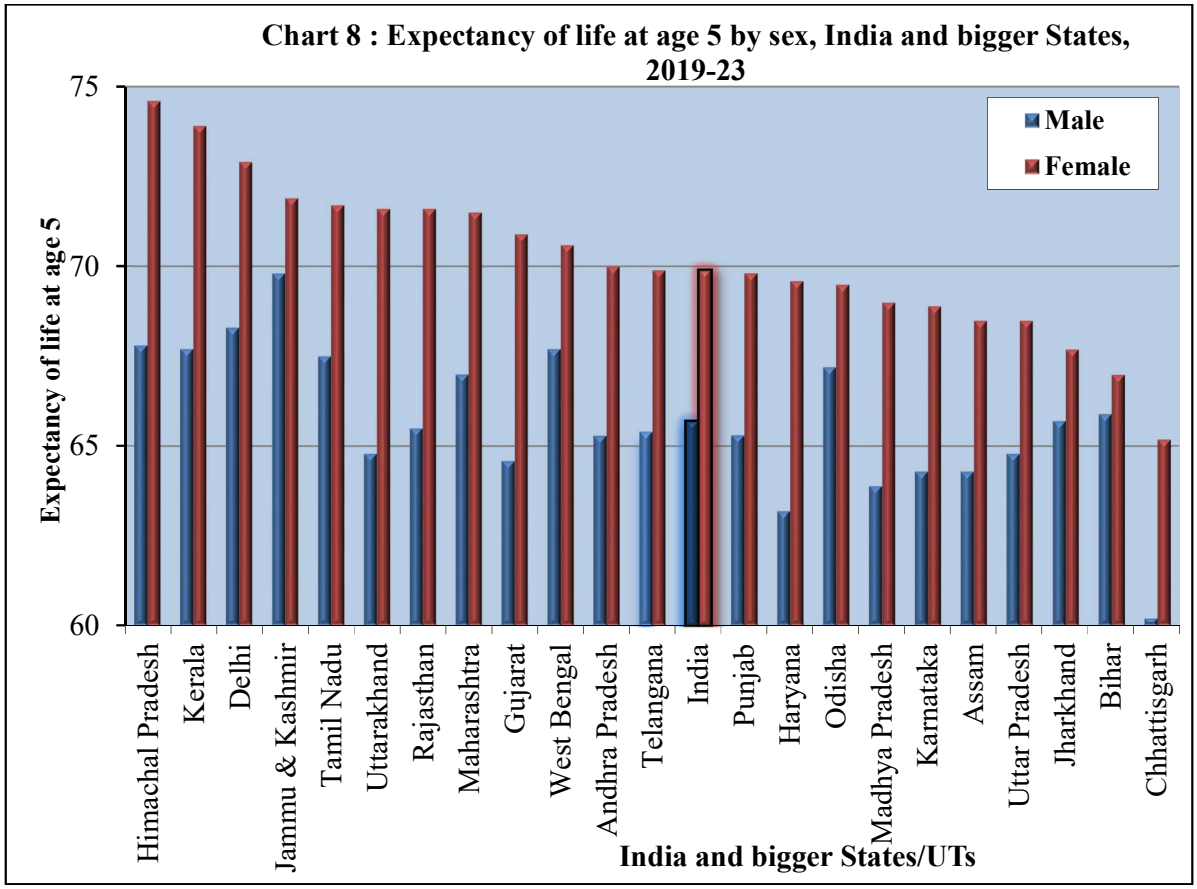

Note: Data arranged in descending order of female life expectancy.

19. The following Chart 7 gives a graphical presentation of the expectancy of life at infancy (age 1) during 2019-23 for India and bigger States/UTs separately for males and females. In general, the expectancy of life at age 1 is higher than that at birth (except in Kerala and Delhi). The expectancy of life for females after attaining the age of 1 is higher than that of males in all the bigger States/UTs. The female life expectancy at infancy is the highest in Himachal Pradesh followed by Kerala and Delhi, whereas it is the lowest for Chhattisgarh followed by Bihar, Jharkhand and Uttar Pradesh in that order.

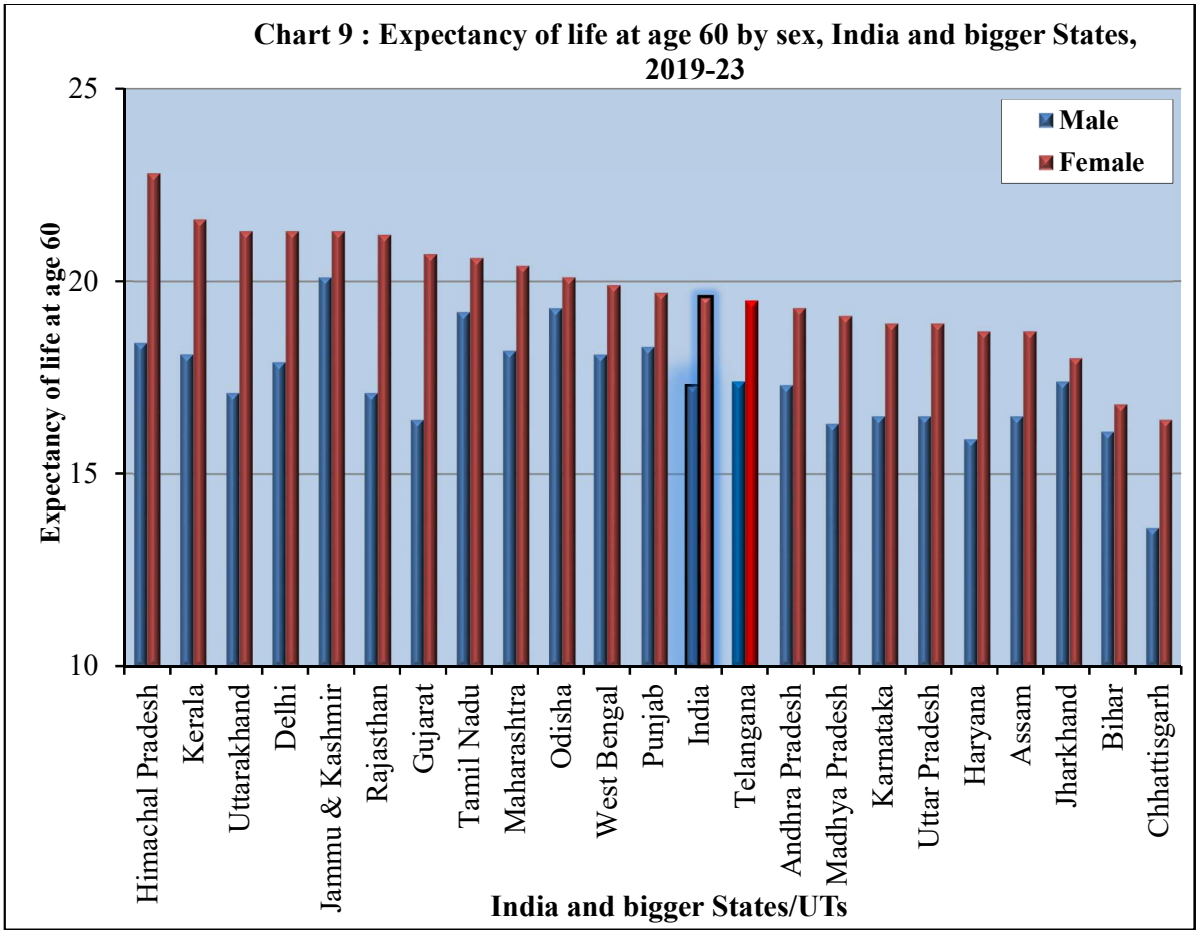

Note: Data arranged in descending order of female life expectancy.

20. The State-wise expectancy of life at childhood (age 5) separately for males and females is presented in the following Chart 8. The life expectancy at age 5 for males is 65.7 years and 69.9 years for females. The female expectancy of life at childhood is higher than males for all bigger States/UTs. The female life expectancy at childhood is highest in Himachal Pradesh followed by Kerala, Delhi and Jammu & Kashmir, whereas it is lowest for Chhattisgarh followed by Bihar and Jharkhand in that order.

Note: Data arranged in descending order of female life expectancy.

21. Chart 9 given below gives graphical presentation of expectancy of life at age 60 years during 2019-23 for India and bigger States/UTs separately for males and females. The life expectancy at age 60 for males and females is 17.3 years and 19.6 years respectively for a Country. The female expectancy of life at age 60 is higher than that of males in all the bigger States/UTs. The female life expectancy at age 60 is highest in the State of Himachal Pradesh followed by Kerala and Uttarakhand, whereas it is lowest for Chhattisgarh followed by Bihar and Jharkhand in that order. The inter-se position of States/UTs in terms of expectancy of life at age 60 differs slightly than that at younger ages. At age 60, Uttarakhand exceeded Delhi, which occupies the better position in ranking of the expectancy of life at birth. Even at age 60, the expectancy of life differs significantly by sex and from State to State.

Note: Data arranged in descending order of female life expectancy.

Male-Female Differential, State-wise:

22. The State-wise variation in the difference between female to male estimated life expectancy at birth and at age 70 during 2019-23 are presented in Charts 10 and 11 respectively. At birth, all the States/UTs have reported favorable differences of female over male life expectancy. However, at age 70, except State of Jharkhand all the States/UTs have reported favorable differences of female over male life expectancy. There is a difference of about 4.0 years in female-male life expectancy at birth at the national level, with the highest difference been recorded at about 7.1 years for Himachal Pradesh. In case of life expectancy at age 70, this difference at the national level is about 1.5 year, with Himachal Pradesh registering the highest difference of 3.4 years amongst the bigger States/UTs.

Chart 10 : Difference in female to male expectancy of life at birth, State-wise, 2019-23

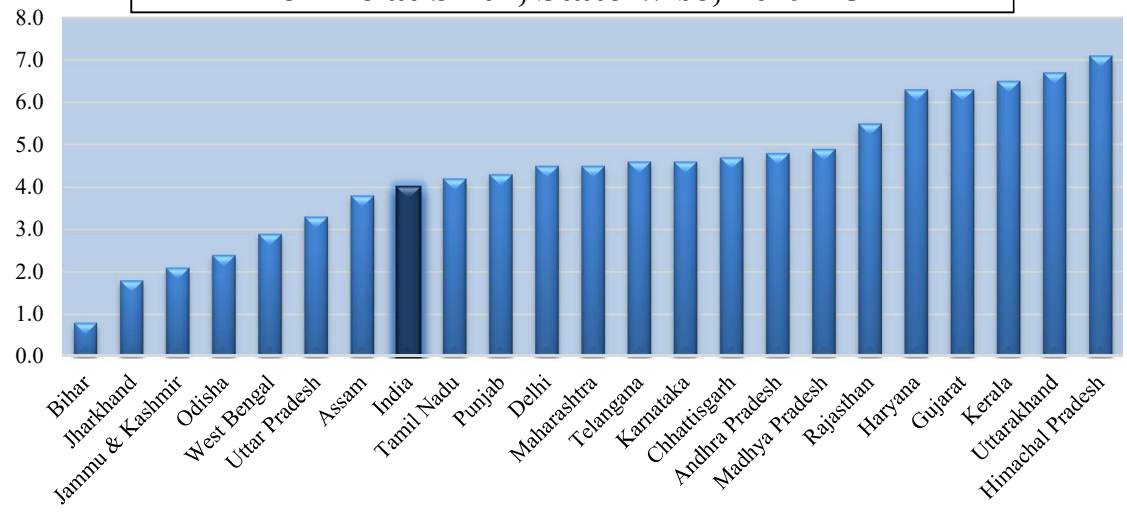

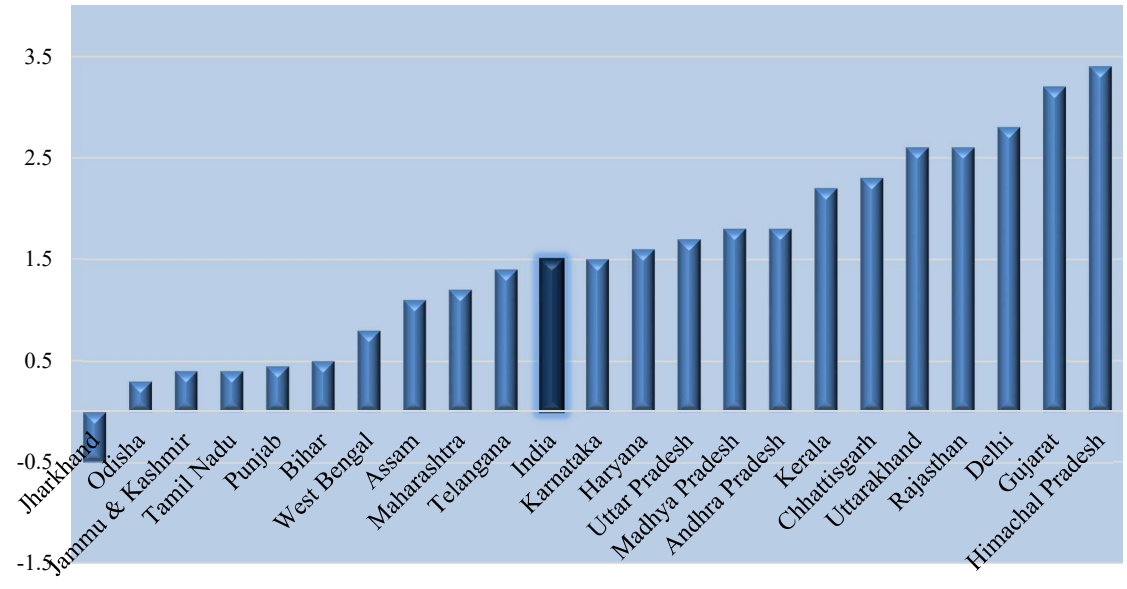

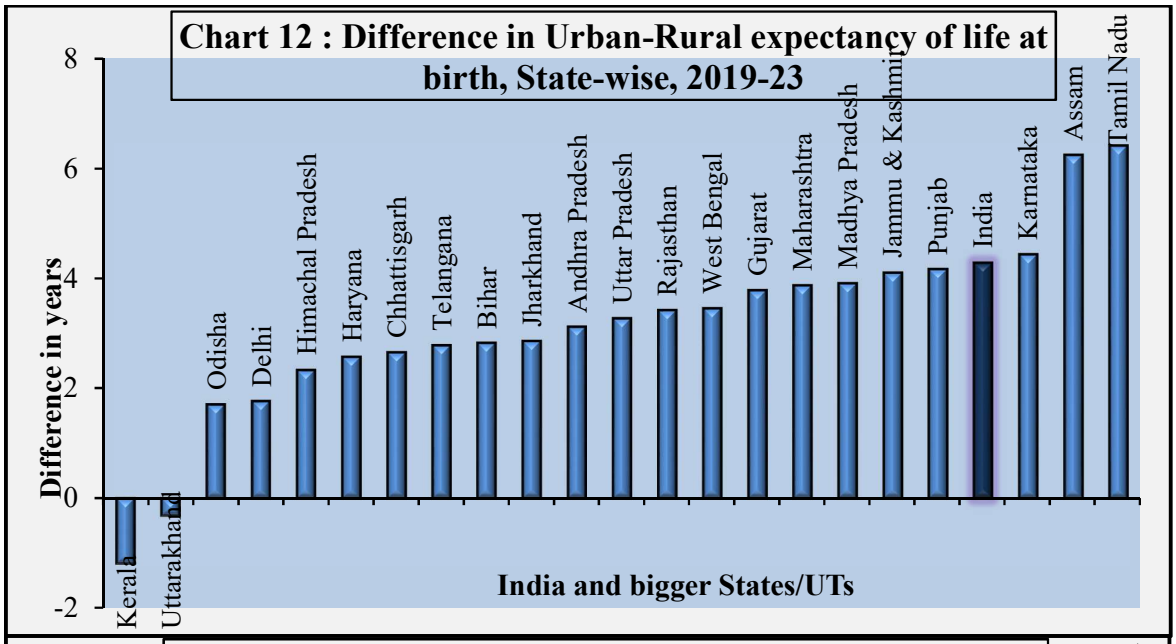

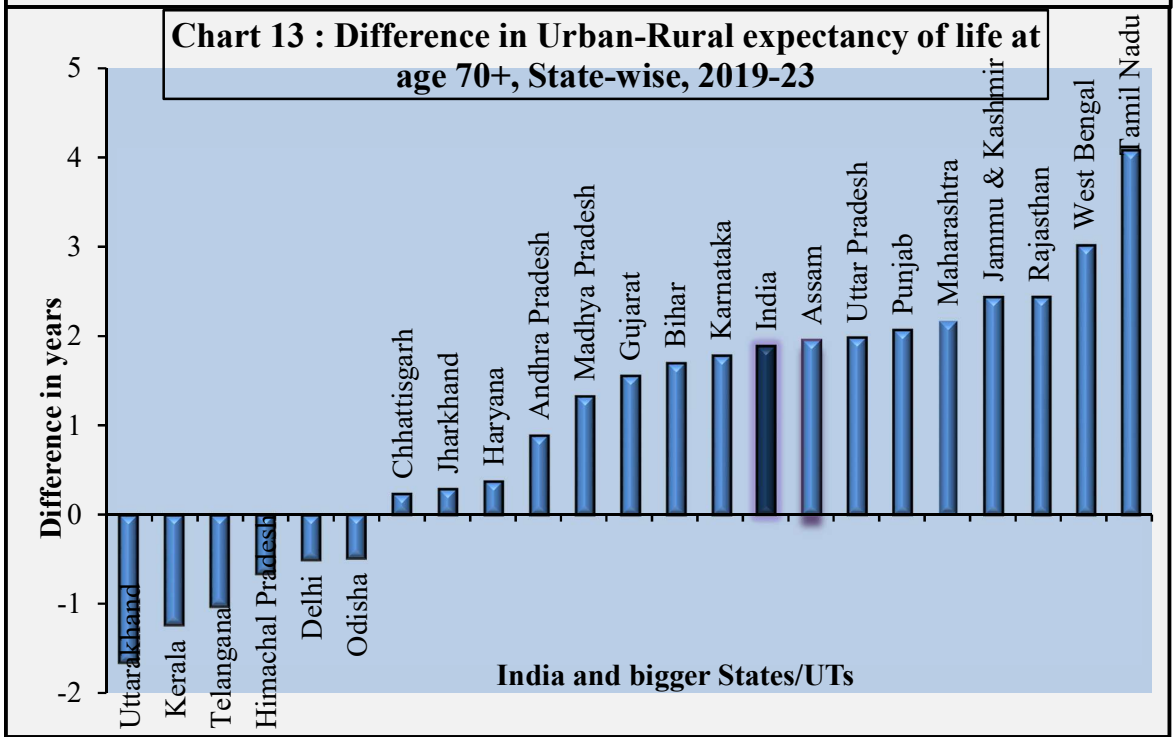

Chart 11 : Difference in female to male expectancy of life at age 70+, State-wise, 2019-23

Urban-Rural Differential, State-wise:

23. The State-wise variation in difference between urban to rural estimated life expectancy at birth and at age 70 during 2019-23 are presented in Chart 12 and 13 respectively. In case of birth (age-0), life expectancy is higher in urban areas than in rural areas for most of the States/UTs; except for Kerala and Uttarakhand which has reported higher rural life expectancy at birth. On the other hand, in case of age 70 years, Uttarakhand, Kerala, Telangana, Himachal Pradesh, Delhi and Odisha have reported higher rural life expectancy while remaining States/UTs have reported higher urban life expectancy. The highest urban-rural difference amongst the bigger States/UTs has been recorded for Tamil Nadu at about 6.4 years and 4.1 years in case of life expectancy at birth and at age 70 years respectively.
